The GLUTX proteins are related to the facultative glucose carriers GLUT1-GLUT5 and have hexose binding and/or transport function. The GLUTX proteins may be used in the diagnosis, prevention and treatment of hexose transport disorders such as ischaemia, diabetes, hyperglycaemia, hypoglycaemia, a glucose metabolism disorder and/or a neurodegenerative disease. The present sequence is rat GLUTX1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Homo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAB66939

The GLUTX proteins may be used in the diagnosis, prevention treatment of hexose transport disorders such as ischaemia, diabetes, hyperglycaemia, hypoglycaemia, a glucose metabolism disorder and/or a neurodegenerative disease. The present sequence is a consensus sequence.

The present invention relates to GLUTX proteins (AAF55865-AAF55871 and AAB66932-AAB66941). The GLUTX proteins are related to the facultative glucose carriers GLUT1-GLUT5 and have hexose binding and/or transport function. The GLUTX proteins may be used in the diagnosis, prevention treatment of hexose transport disorders such as ischaemia, diabetes, hyperglycaemia, hypoglycaemia, a glucose metabolism disorder and/or a neurodegenerative disease. The present sequence is murine GLUTX1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to GLUTX proteins (AAF55865-AAF55871 and AAB66932-AAB66941). The GLUTX proteins are related to the facultative glucose carriers GLUT1-GLUT5 and have hexose binding and/or transport function. The GLUTX proteins may be used in the diagnosis, prevention treatment of hexose transport disorders such as ischaemia, diabetes, hyperglycaemia, hypoglycaemia, a glucose metabolism disorder and/or a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            e.g.
Nucleic acids encoding GLUTX glucose transporter proteins, useful in the prevention, diagnosis and treatment of hexose transport disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to GLUTX proteins (AAF55865-AAF55871 and AAB66932-AAB66941). The GLUTX proteins are related to the facultative glucose carriers GLUT1-GLUT5 and have hexose binding and/or transport function. The GLUTX proteins may be used in the diagnosis, prevention treatment of hexose transport disorders such as ischaemia, diabetes, hyperglycaemia, hypodylcaemia, a glucose metabolism disorder and/or a neurodegenerative disease. The present sequence is human GLUTX3.
                                                                  Claim
                                                                                                                                            Nucleic acids encoding GLUTX glucose transporter prevention, diagnosis and treatment of hexose e.g. ischemia and diabetes -

The GLUTX proteins are related to the facultative glucose carriers GLUT1-GLUT5 and have hexose binding and/or transport function. The GLUTX proteins may be used in the diagnosis, prevention an treatment of hexose transport disorders such as ischaemia, diabetes, hyperglycaemia, hypoglycaemia, a glucose metabolism disorder and/or a neurodegenerative disease. The present sequence is a consensus sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Best Local Similarity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    asthma and anaemia. They may also be used for treating wounds, burns, ulcers, osteoporosis, osteoarthritis, periodontal diseases, Alzheimer's disease, Parkinson's disease, Huntington's disease and amyotrophic lateral sclerosis (ALS). Proteins with activin/inhibin activity may additionally be useful as contraceptives. Nucleic acid sequences of the invention may be used in chromosome mapping, and as a source of diagnostic primers and probes. The present sequence represents one of the

The genes and proteins have activities dependent on the tissues and cells in which they are expressed. Examples of their activities include immunosuppressive; antiarthritic:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         the invention.

insulin dependent diabetes mellitus; and allergic reactions such as asthma and anaemia. They may also be used for treating wounds, burns, ulcers, osteoporosis, osteoarthritis, periodontal diseases, Alzheimer's disease, Parkinson's disease, Huntington's disease and amyotrophic lateral sclerosis (ALS). Proteins with activin/inhibin activity may additionally be useful as contraceptives. Nucleic acid sequences of the invention may be used in chromosome mapping, and as a source of diagnostic primers and probes. Sequences AAY95024-Y95025, AAY95029 and AAY95031-Y95032 represent additional open reading frames (ORFs) that are
                                                                                                                                                                                                                                        regime. Diseases or conditions that may be treated using the proteins or nucleotides of the invention include autoimmune diseases; genetic disorders; haemophilia; cardiovascular diseases; cancer; bacterial, fungal and viral infections, especially HIV; multiple sclerosis; rheumatoid arthritis; pulmonary inflammation; Guillain-Barre syndrome; insulin dependent diabetes mellitus; and allergic reactions such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    24-AUG-1998;

The secreted proteins of the invention include those that are thought to be only partially secreted, i.e., transmembrane proteins. The proteins of the invention may exhibit one or more activities selected from the following:
                                                         encoded by deletional or insertional variants of
                                                                                                                                                                                                                                                                                                                                                                   inhibition activity. The proteins may be administered to patients as vaccines, and the nucleotides may be used as part of a gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                   and thrombolytic activity; anti-inflammatory activity; and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Disclosure; Page 351-352; 357pp; English

The GLUTX proteins are related to the facultative glucose carriers GLUT1-GLUT5 and have hexose binding and/or transport function. The GLUTX proteins may be used in the diagnosis, prevention are treatment of hexose transport disorders such as ischaemia, diabetes, hyperglycaemia, hypoglycaemia, a glucose metabolism disorder and/or a neurodegenerative disease. The present sequence is rat GLUTX3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          the peg.

```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
